

Practical 2

Creating account, repository on Github and Cloning repository in Github.

a) Creating Account:

Step 1: Go to <https://github.com/join> in a web browser. You can use any web browser on your computer, phone or tablet to join.

Step 2: Enter your personal details and complete the CAPTCHA puzzle.

Join GitHub · GitHub

github.com/join?ref_cta=Sign+up&ref_loc=header+logged+out&ref_page=%2F&source=header-home

Create your account

Step 4: Select your preferences and click on 'Complete Setup'.

Step 5: Verify your email. This confirms your email address and returns you to sign up process.

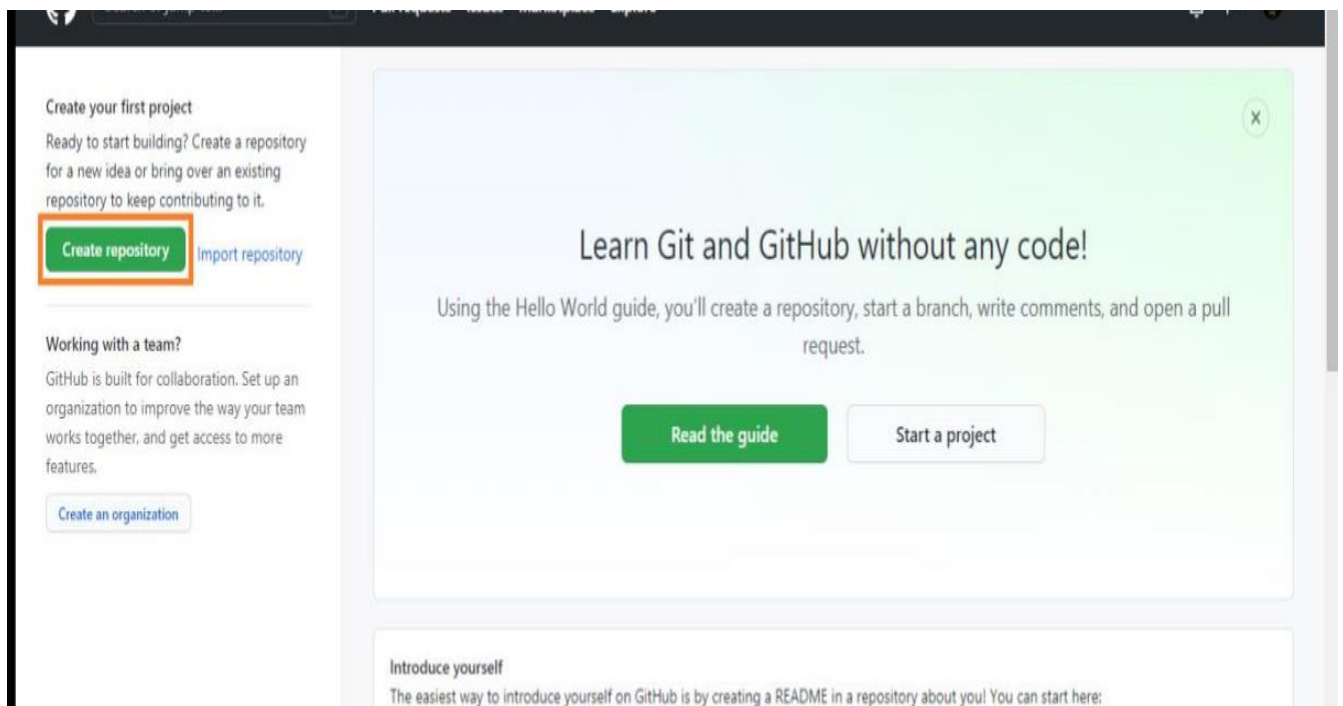

Step 6: After the email verification the account will be created. The below page will appear once the account is created.

b) Creating Repository:

Step 1: Click on the 'Create Repository' button given on the left side.

Step 2: Fill the details and click on the 'Create repository' button below.

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner * Bechu562 / Repository name * IT TOOLS ✓

Great repository names are [IT TOOLS](#). [Your new repository will be created as IT-TOOL.](#) [How about literate-broccoli?](#)

Description (optional)
IT TOOLS Practicals

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:
Skip this step if you're importing an existing repository.

☐ Add a README file
This is where you can write a long description for your project. [Learn more.](#)

☐ Add .gitignore
Choose which files not to track from a list of templates. [Learn more.](#)

☐ Choose a license
A license tells others what they can and can't do with your code. [Learn more.](#)

[Create repository](#)

Step 3: You can also create or upload files in your repository from your system as given below.

Using the Hello world guide, you'll start a branch, write comments, and open a pull request.

[Read the guide](#)

[Code](#) [Issues](#) [Pull requests](#) [Actions](#) [Projects](#) [Wiki](#) [Security](#) [Insights](#) [Settings](#)

Quick setup — if you've done this kind of thing before

[Set up in Desktop](#) or [HTTPS](#) [SSH](#) <https://github.com/Bechu562/IT-TOOLS.git>

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# IT-TOOLS" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/Bechu562/IT-TOOLS.git
git push -u origin main
```

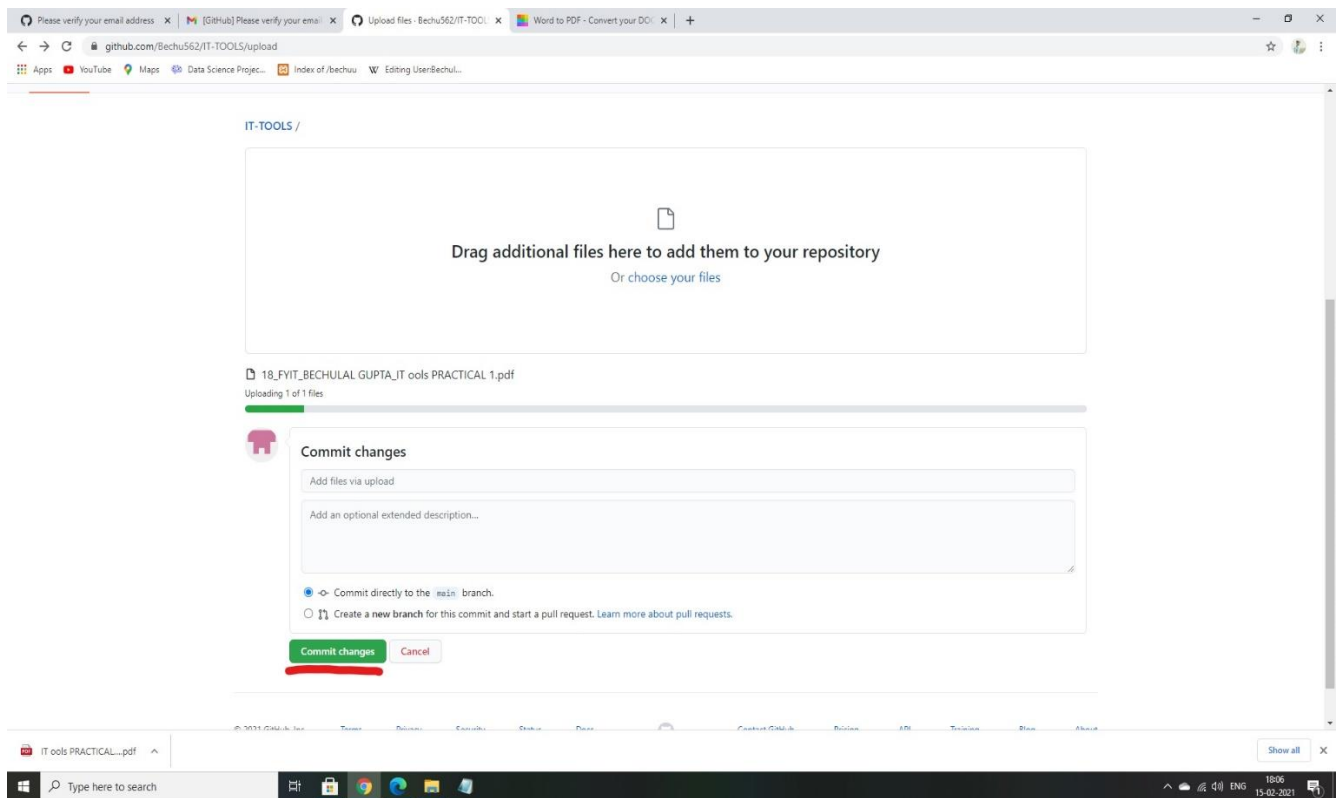

...or push an existing repository from the command line

```
git remote add origin https://github.com/Bechu562/IT-TOOLS.git
git branch -M main
git push -u origin main
```

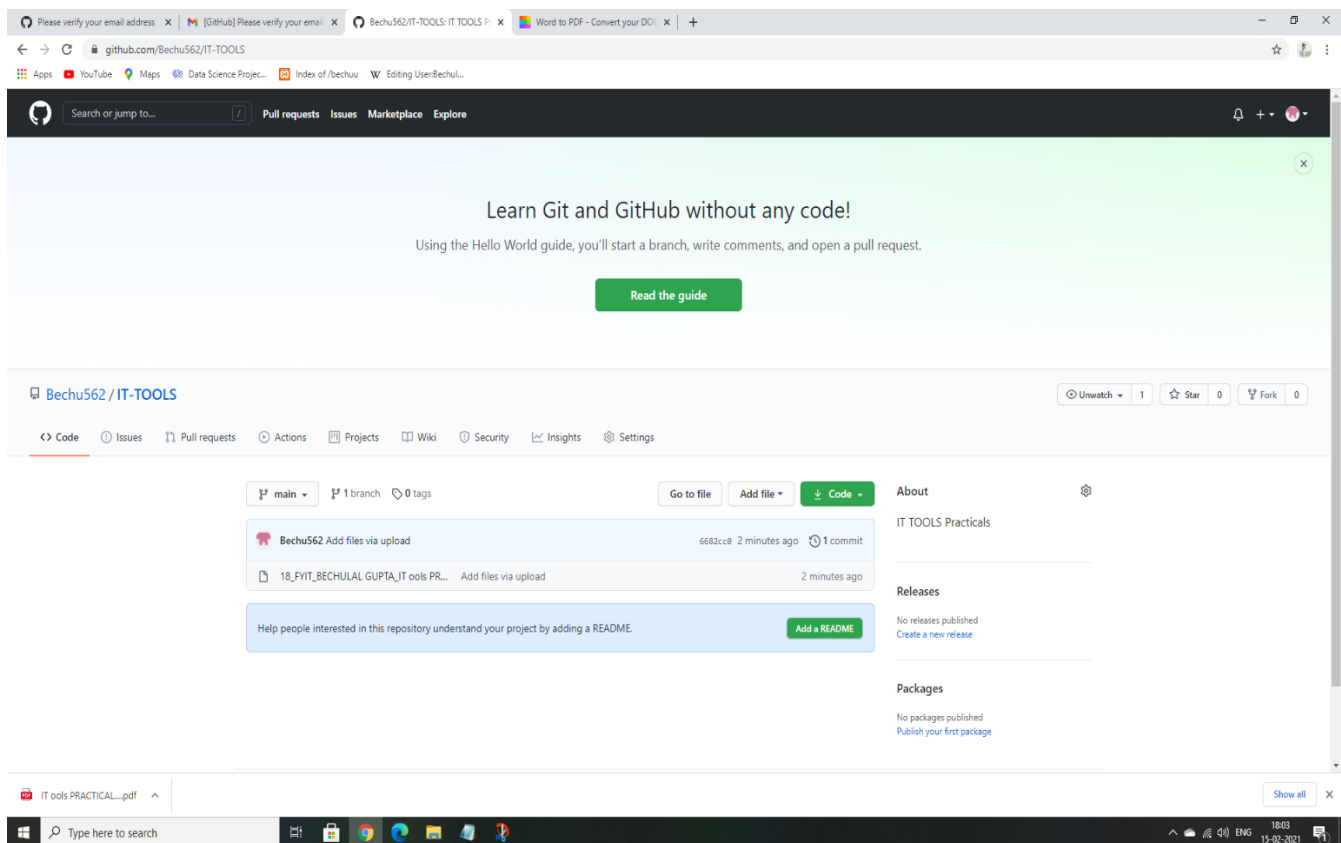

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

Step 4: After uploading files click on the 'Commit changes' button.

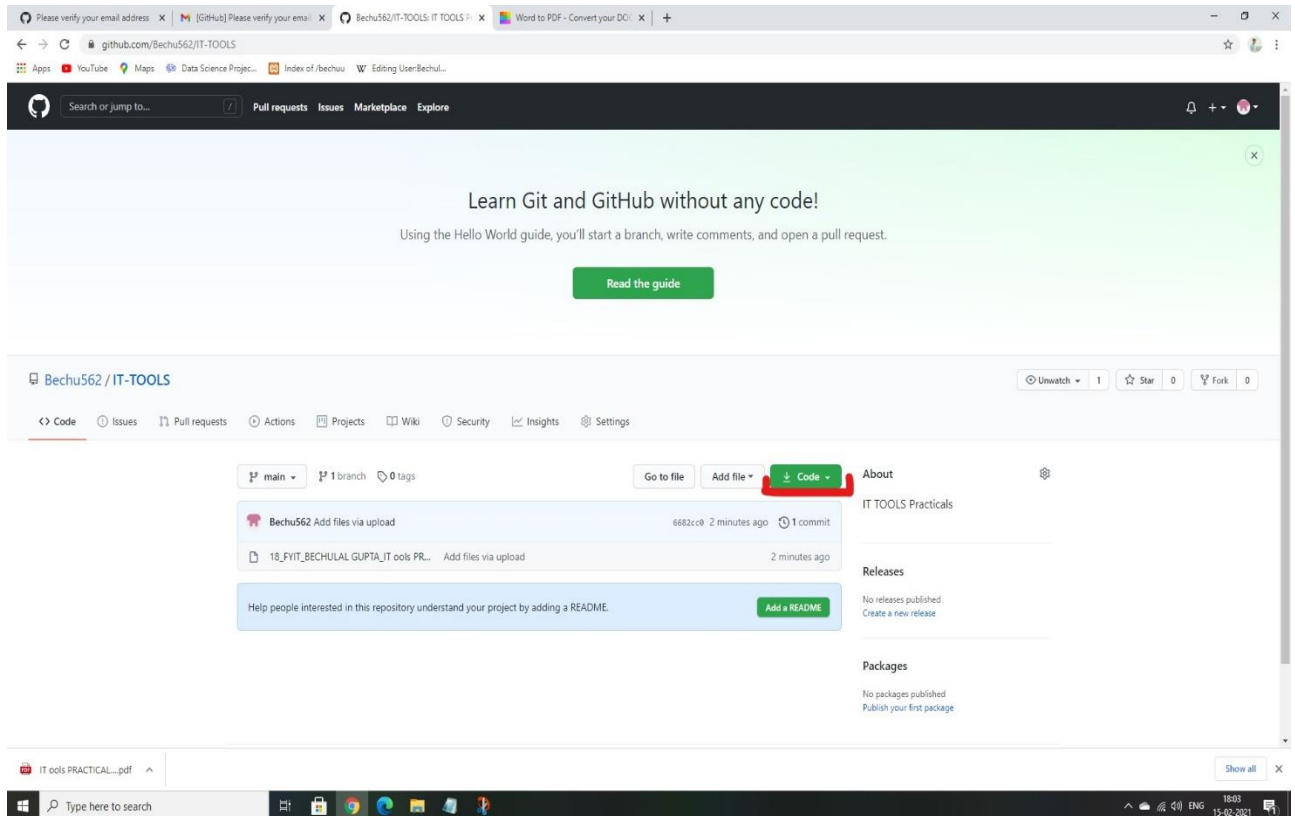

Step 5: Now the repository has been created as you can see below.

c) Cloning Repository:

Step 1: Click on the 'Code' button as mentioned below.

Step 2: Click on the clipboard icon as mentioned to copy the url. It will create a clone of your repository.
